

# Vanshita Jain

Software Engineer — Backend & AI Tooling

+91 7355042461 | vanshitajain1204@gmail.com | [Portfolio](#) | [GitHub](#) | [LinkedIn](#)

## PROFESSIONAL SUMMARY

Backend engineer applying AI to systematize software delivery — integrated Claude/LLMs across the SDLC (API specs, docs, test scaffolding), reducing cycle time by ~30%. Foundation in data engineering (Foundation Level in Data Science, IIT Madras) and distributed analytics at scale, with production experience across multi-tenant SaaS, OLAP pipelines on Citus, and sub-second APIs under 20K+ concurrent load.

## TECHNICAL SKILLS

**Languages:** Python, SQL

**Focus:** LLM Integration (Claude), Distributed Systems, Multi-tenant Architecture, Performance Engineering, ETL, OLAP

**Frameworks:** Django, DRF, FastAPI, Flask

**Databases:** PostgreSQL, Citus, MySQL, MongoDB, Redis

**Infrastructure:** Docker, Celery, GCP, Google Pub/Sub, Jenkins, Sentry, Grafana

## EXPERIENCE

### [Tarams Software Technologies](#)

January 2025 – Present

Software Engineer · Remote

### [JrnyOn](#) — Travel Booking & Experiences Platform

July 2025 – Present

- Integrated Claude into the SDLC — automated OpenAPI specs, architecture docs, and test scaffolding across 20+ modules; cut feature cycle time ~30% and lifted documentation coverage to ~100%.
- Built an influencer engagement analytics pipeline — ingested ~100K+ Mixpanel events/day, aggregated into OLAP schemas via scheduled ETL, leveraged Citus for distributed queries on multi-million row datasets; exposed APIs at <200 ms p95 powering real-time dashboards tracking 10+ KPIs.
- Architected multi-tenant IAM (subdomain routing, SSO with JWT rotation, per-tenant RBAC) onboarding 3 B2B partners (~20K users) with 0 data leakage and <5 ms auth overhead.

### [Outset \(now Button\)](#) — Retail & Resale Product Enrichment

January 2025 – July 2025

- Built fault-tolerant Celery pipelines with parallel workers, retry queues, and variable-volume ingestion; improved product data coverage by +40%.
- Designed an Attribute Normalization Engine with weighted synonym mapping; improved classification accuracy from 61% → 91%, eliminating the manual review bottleneck.

### [Suraasa](#)

April 2023 – January 2025

Software Development Engineer · Remote

- Drove P95 query latency ~1s → ~400 ms for 20K+ concurrent users via composite indexing, SQL refactoring, and Redis caching — zero incidents under full olympiad load.
- Co-owned the backend of Suraasa Jobs — RBAC, listing/application APIs, recruiter-driven school-teacher matching; shipped to 20K+ users.
- Built metaprogramming utilities standardizing logging, error handling, and event-schema validation across all microservices.

## PROJECTS

- [Job Aggregator & Analyzer](#) — Full-stack job aggregator scraping LinkedIn / Indeed / Hirst on a Celery-beat schedule (Playwright + curl\_cffi for TLS fingerprint bypass); JWT auth, GCS-backed CV uploads, application-status tracking, and pluggable multi-provider LLM CV tailoring (Groq / OpenAI / Anthropic / Gemini); shipped as a 5-service Docker Compose stack.
- [Influencer Sponsorship Management](#) — REST API backend for end-to-end campaign management — Celery scheduling, Redis-cached real-time metrics, full campaign workflow.

## EDUCATION

Master's in Computer Applications (MCA) | IGNOU

December 2026 (expected)

[Diploma in Programming](#) | IIT Madras

2024

[B.Sc. \(Hons.\) Computer Science](#) | [Hansraj College, University of Delhi](#)

2023

## CERTIFICATIONS

[SystemsExpert](#) | AlgoExpert

2023

[Foundation Level in Data Science and Applications](#) | IIT Madras

2022
